Course Code	ADVANCED ORGANIC CHEMISTRY - I	L	T	P	C
		21S02101	4	0	0
<b>Semester</b>		<b>I</b>			
<b>Course Objectives:</b>					
The course structure is designed to give the knowledge of organic chemistry at an advanced level and mainly aimed at the stereochemistry and different organic named reactions including preparations of reactive intermediates.					
<b>Course Outcomes (CO):</b> Student will be able to					
<ul style="list-style-type: none"> <li>• Position to design a stereo selective synthesis of new chemical entities (NCE) for the treatment of different diseases in new drug discovery Program.</li> </ul>					
<b>UNIT - I</b>					
<b>Stereochemistry</b>					
Elements of symmetry, simple axis of symmetry. Notation, relative configuration and absolute configuration. Compounds with a chiral carbon atom, compounds with other quadrivalent chiral atoms. Optical isomerism in compounds containing no chiral atom, biphenyl, allenes, compounds with exocyclic double bonds and spirans. Chirality due to helical shape. cis / trans, E – Z isomerism resulting from double bonds, monocyclic compounds, fused ring system. Racemic modifications and methods for resolution of racemic mixtures. Asymmetric synthesis and stereo – selective synthesis.					
<b>UNIT - II</b>					
a. Reactive Intermediates: Definitions, generation, stability, structure and reactivity of free radicals carbocations, carbanions, carbenes, Nitrenes/Nitrenium ions. b. Concepts of aromaticity and antiaromaticity, nonbenzenoid aromatic compounds. c. Mechanisms of organic reactions: Free radical, Electrophilic, Nucleophilic reactions of aliphatic and aromatic compounds					
<b>UNIT - III</b>					
Detailed knowledge regarding the reactions, mechanisms and their relative reactivity and orientations. a) Addition reactions b) Nucleophilic uni- and bimolecular reactions (SN1 and SN2) c) Elimination reactions (E1 & E2; Hoffman & Saytzeff's rule)					
<b>UNIT - IV</b>					
Electrocyclic, pericyclic and sigmatropic reactions: Introduction, terminology and mechanism, with suitable examples.					
<b>UNIT - V</b>					
<b>Study of mechanism and synthetic applications of following named Reactions:</b>					
Ugi reaction, Brook rearrangement, Ullmann coupling reactions, Dieckmann Reaction, Doebner-Miller Reaction, Mitsunobu reaction, Sandmeyer Reaction, Mannich reaction, Vilsmeier-Haack Reaction, Ozonolysis and Michael addition reaction					
<b>Textbooks:</b>

Course Code	ADVANCED MEDICINAL CHEMISTRY – I	L	T	P	C
21S02102		4	0	0	4
Pre-requisite	Semester	I			
<b>Course Objectives:</b>					
The course contents are mainly aimed to have advanced knowledge of rational drug design including QSAR and molecular modeling and also aimed at the identification of lead molecule from natural sources for the development of new drugs.					
<b>Course Outcomes (CO):</b> Student will be able to					
<ul style="list-style-type: none"> <li>•The application of basic knowledge of pharmaceutical-chemical aspects of drugs that are in clinical use in defining, analyzing and proposing actions related to the research and implementation of new laboratory methods for detecting and monitoring diseases and effects and/or efficacy of the therapy.</li> <li>•Interpretation of the results of laboratory analysis by the clinical aspects by knowing the pharmacotherapeutic groups of drugs, their classification, and the most important representatives.</li> <li>• The assurance of positive interactions with patients, colleagues, health professionals and the public.</li> </ul>					
<b>UNIT – I</b>					
a) Physicochemical properties in relation to biological action b) Modern methods of Drug Discovery target validation: Introduction to discovery of lead molecule, methods, rational drug discovery models. Target structure, active site identification and methods of validation.					
<b>UNIT – II</b>					
<b>Prodrug Design and Analog design</b>					
a) Prodrug design: Basic concept, Carrier linked prodrugs/Bioprecursors, Prodrugs of functional group, Prodrugs to improve patient acceptability, Drug solubility, Drug absorption and distribution, site specific drug delivery and sustained drug action. Rationale of prodrug design and practical consideration of prodrug design.					
b) Combating drug resistance: Causes for drug resistance, strategies to combat drug resistance in antibiotics and anticancer therapy, Genetic principles of drug resistance.					
c) Analog Design: Introduction, Classical & Non classical, Bioisosteric replacement strategies, rigid analogs, alteration of chain branching, changes in ring size, ring position isomers, design of stereo isomers and geometric isomers, fragments of a lead molecule, variation in inter atomic distance.					
<b>UNIT – III</b>					
Medicinal chemistry aspects of the following class of drugs Systematic study, SAR, Mechanism of action and synthesis of new generation molecules of following class of drugs: Anti-hypertensive drugs, Anti convulsant drugs, COX1 & COX2 inhibitors, H1 & H2 receptor antagonist, Antineoplastic and Antiviralagents.					
<b>UNIT – IV</b>					

**JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY ANANTAPUR**

**ANANTHAPURAMU – 515 002 (A.P) INDIA**

**M.PHARM. IN PHARMACEUTICAL CHEMISTRY**

**COURSE STRUCTURE & SYLLABI**

Stereochemistry and Drug action: Realization that stereo selectivity is a pre-requisite for evolution. Role of chirality in selective and specific therapeutic agents. Case studies, Enantio selectivity in drug adsorption, metabolism, distribution and elimination.	
<b>UNIT – V</b>	
<b>Structure based drug design</b>	
Inhibitors of HIV-I Prokinase, Structural studies of HIV-I Reverse transcriptase and implications for drug design, Bradykinin receptor antagonists, Design of purine nucleoside and Phosphorylase inhibitors, Aldose Reductase Inhibitors, Thrombin inhibitors. Rhinoviral-Capsid-biding Inhibitors.

Course Code	CHEMISTRY OF NATURAL PRODUCTS	L	T	P	C
21S02103		4	0	0	4
<b>Semester</b>		<b>I</b>			
<b>Course Objectives:</b>					
The contents of Unit I mainly aimed to identify lead molecules from the natural sources. The contents of Unit II & III are mainly designed to have the knowledge of alkaloids and steroids especially structural elucidation of few important compounds. The contents of Unit IV and V are to offer an understanding of utilization of natural products for the preparation of new molecules for the treatment of different diseases like cancer, malaria etc.					
<b>Course Outcomes (CO):</b> Student will be able to					
<ul style="list-style-type: none"> <li>• Position to explore the natural lead compounds for the treatment of different diseases like cancer, malaria, diabetes etc</li> </ul>					
<b>UNIT – I</b>					
<p><b>Extraction:</b> Introduction, definition, factors influencing the choice of extraction, principles of extraction methods, types of extraction (extraction of plant drugs by microwave assisted techniques wherever applicable) and their merits and demerits. Selection and purification of solvents for extraction</p> <p><b>Carbohydrates:</b> Introduction, Definition, Classification, Nomenclature, Source, Importance, Structure, Chemistry, Structural elucidation of Glucose.</p> <p><b>Glycosides:</b> Introduction, Definition, Classification, Nomenclature, Source, Importance, Structure, Chemistry, Structural elucidation of cardiac glycosides-Digoxin.</p> <p><b>Vitamins:</b> Introduction, Definition, Classification, Nomenclature, Source, Importance, Structure, Chemistry, Structural elucidation of Ascorbic Acid.</p>					
<b>UNIT – II</b>					
<p><b>Steroids:</b> Introduction, Definition, Classification, Nomenclature, Source, Importance, Structure, Chemistry, Structural elucidation of Cholesterol.</p> <p><b>Terpenoids:</b> Introduction, Definition, Classification, Nomenclature, Source, Importance, Structure, Chemistry, Structural elucidation of Citral, Menthol and Zingiberene. Isoprene and Special Isoprene rule.</p> <p><b>Anti-biotics:</b> Introduction, Definition, Classification, Nomenclature, Source, Importance, Structure, Chemistry, Structural elucidation of Penicillin.</p>					
<b>UNIT – III</b>					
<p><b>Amino acids:</b> Introduction, Definition, Classification, Nomenclature, Source, Importance. General Preparation and Properties of Amino acids.</p> <p><b>Peptides:</b> Introduction, Definition, Classification, Synthesis, determination of structure of Peptides.</p> <p><b>Proteins:</b> Introduction, Definition, Classification, Properties, Structure of protein, Chemistry of Insulin.</p> <p><b>Alkaloids:</b> Introduction, Definition, Classification, Nomenclature, Source, Importance, Structure, Chemistry, Structural elucidation of Quinine.</p> <p><b>Purines:</b> Introduction, Definition, Classification, Nomenclature, Source, Importance, Structure, Chemistry, Structural elucidation of Caffeine.</p>					
<b>UNIT – IV</b>					
<p><b>Natural Pigments:</b> Introduction, Definition, Classification, Nomenclature, Source, Importance, Structure, Chemistry, Structural elucidation of Carotene.</p> <p><b>Plant Hormones:</b> Introduction, Definition, Classification, Nomenclature, Source, Importance, Structure, Chemistry, Structural elucidation of Auxins.</p>

21S02201		4	0	0	4
<b>Semester</b>		<b>II</b>			
<b>Course Objectives:</b>					
The content of Unit I and II are mainly aimed at utilization of different synthetic reagents used in the preparation of intermediates and final compounds and also aimed at the principles of green chemistry. Unit III and IV contents are mainly aimed at scale of processes for the preparation of new pharmaceutical agents and also to design different synthetic strategies. Unit V is mainly aimed to utilize the knowledge of chemical library for drug design					
<b>Course Outcomes (CO):</b> Student will be able to					
<ul style="list-style-type: none"> <li>• Position to have advanced knowledge of different synthetic reagents and reaction processes, synthetic routes by involving green chemistry principles.</li> <li>• Techniques to utilize the chemical library of combinatorial chemistry.</li> </ul>					
<b>UNIT – I</b>					
<b>Synthetic Reagents &amp; Application</b>					
Lead Tetra Acetate (LTA), N- Bromosuccinimide (NBS), Osmium Tetroxide, Lithium Aluminum Hydride (LAH) and Sodium Borohydride, Dicyclohexylcarbodiimide (DCC) and 2,3-dichloro-5,6-dicyano-1,4-benzoquinone (DDQ).					
<b>UNIT – II</b>					
<b>Catalysis</b>					
a.Types of catalysis, heterogeneous and homogenous catalysis, advantages and disadvantages					
b.Heterogeneous catalysis – preparation, characterization, kinetics, supported catalysts, catalyst deactivation and regeneration, some examples of heterogeneous catalysis used in synthesis of drugs.					
c.Homogenous catalysis, hydrogenation, hydroformylation, hydrocyanation, Wilkinson catalysts, chiral ligands and chiral induction, Ziegler-Natta catalysts, some examples of homogenous catalysis used in synthesis of drugs					
d.Transition-metal and Organo-catalysis in organic synthesis: Metal-catalyzed reactions					
e.Phase transfer catalysis -theory and applications					
<b>UNIT – III</b>					
<b>Molecular Rearrangements &amp; their applications</b>					
1. Carbon to Carbon Migration: Wagner – Meerwin rearrangement, Claisen rearrangement and benzil – benzoic acid rearrangement.					
2. Carbon to Nitrogen Migration: Hoffmann rearrangement, Curtius rearrangement and Lossen rearrangement, Beckman rearrangement.					
3. Carbon to Oxygen Migration: Baeyer – Villiger rearrangement, Rearrangement of hydroperoxides and Wittig rearrangement					
<b>UNIT – IV</b>					
<b>Chemistry of peptides</b>					
a. Coupling reactions in peptide synthesis					
b. Principles of solid phase peptide synthesis, t-BOC and Fmoc protocols, various solid supports and linkers: Activation procedures, peptide bond formation, deprotection and cleavage from resin, low and high HF cleavage protocols, formation of free peptides and

peptide amides, purification and case studies, site-specific chemical modifications of peptides		
c. Segment and sequential strategies for solution phase peptide synthesis with any two case studies Side reactions in peptide synthesis: Deletion peptides, side reactions initiated by proton abstraction, protonation, over activation and side reactions of individual aminoacids.		
<b>UNIT – V</b>		
<b>Green Chemistry</b>		
a. Introduction, principles of green chemistry		
b. Microwave assisted reactions: Merit and demerits of its use, increased reaction rates, mechanism, superheating effects of microwave, effects of solvents in microwave assisted synthesis, microwave technology in process optimization, its applications in various organic reactions and heterocycles synthesis		
c. Ultrasound assisted reactions: Types of sono chemical reactions, homogenous, heterogeneous liquid- liquid and liquid-solid reactions, synthetic applications

<b>Semester</b>		<b>II</b>			
<b>Course Objectives:</b>					
The course contents of Unit I and Unit II are mainly aimed at enzyme inhibitors for the treatment of different CNS and CVS diseases. Unit III contents are aimed to have advanced knowledge of the developments of antipsychotic agents. The remaining contents are aimed to design prodrugs, peptidomimetic agents and recombinant DNA products.					
<b>Course Outcomes (CO):</b> Student will be able to					
<ul style="list-style-type: none"> <li>• The student would be in a position to involve in the development of different enzyme inhibitors, prodrugs and also equipped with different biotechnological techniques of recombinant DNA products.</li> </ul>					
<b>UNIT – I</b>					
<b>Enzyme Inhibitors I</b>					
A detailed study of the following types of enzyme inhibitors, related drugs and their pharmaceutical significance:					
<ol style="list-style-type: none"> <li>a) Prostaglandin Synthetase (Cyclooxygenase &amp; Lipoygenase Inhibitors)</li> <li>b) Phosphodiesterase (PDE) Inhibitors</li> <li>c) Carbonic Anhydrase Inhibitors.</li> <li>d) Beta-Secretase.</li> </ol>					
<b>UNIT – II</b>					
<b>Enzyme Inhibitors II</b>					
<ol style="list-style-type: none"> <li>a. Angiotensin Converting Enzyme (ACE) Inhibitors</li> <li>b. Acetyl Cholinesterase (Ach E) Inhibitors.</li> <li>c. HMG-CoA inhibitors</li> <li>d. Protease inhibitors</li> </ol>					
<b>UNIT – III</b>					
<b>Antipsychotic Agents</b>					
Role of Dopamine, Serotonin, Glutamate and their receptors. SAR and Pharmacokinetics of Ticyclic Neuroleptics, Butyrophenones and Benzamides. A brief account of non – benzodiazepine agonist.					
<b>UNIT – IV</b>					
Peptidomimetics Therapeutic values of Peptidomimetics, design of peptidomimetics by manipulation of the amino acids, modification of the peptide backbone, incorporating conformational constraints locally or globally. Chemistry of prostaglandins, leukotrienes and thromboxones.					
<b>UNIT – V</b>					
<p><b>Biotechnologically produced drugs:</b> Biotechnology of Recombinant DNA, Process of Recombinant proteins, Immunogenicity of biotechnologically produced drugs.</p> <p><b>Recombinant drug products:</b> Hormones, cytokinins, interferons, Interleukins, enzymes, vaccines and monoclonal antibody drugs.</p>

Course Code	COMPUTER AIDED DRUG DESIGN	L	T	P	C
		21S02203	4	0	0
<b>Semester</b>		<b>II</b>			
<b>Course Objectives:</b>					
The subject is designed to impart knowledge on the current state of the art techniques involved in computer assisted drug design.					
<b>Course Outcomes (CO):</b> Student will be able to					
<ul style="list-style-type: none"> <li>• Role of CADD in drug discovery</li> <li>• Different CADD techniques and their applications</li> <li>• Various strategies to design and develop new drug like molecules.</li> <li>• Working with molecular modeling softwares to design new drug molecules</li> <li>• The in silico virtual screening protocols</li> </ul>					
<b>UNIT – I</b>					
Introduction to Computer Aided Drug Design (CADD) History, different techniques and applications. Quantitative Structure Activity Relationships: Basics History and development of QSAR: Physicochemical parameters and methods to calculate physicochemical parameters: Hammett equation and electronic parameters (sigma), lipophilicity effects and parameters (log P, pi-substituent constant), steric effects (Taft steric and MR parameters) Experimental and theoretical approaches for the determination of these physicochemical parameters.					
<b>UNIT – II</b>					
Quantitative Structure Activity Relationships: Applications Hansch analysis, Free Wilson analysis and relationship between them, Advantages and disadvantages; Deriving 2D-QSAR equations. 3D-QSAR approaches and contour map analysis. Statistical methods used in QSAR analysis and importance of statistical parameters					
<b>UNIT – III</b>					
<b>Molecular Modeling and Docking</b>					
a) Molecular and Quantum Mechanics in drug design. b) Energy Minimization Methods: comparison between global minimum conformation and bioactive conformation c) Molecular docking and drug receptor interactions: Rigid docking, flexible docking and extra-precision docking. Agents acting on enzymes such as DHFR, HMG-CoA reductase and HIV protease, choline esterase (AChE & BchE)					
<b>UNIT – IV</b>					
<b>Molecular Properties and Drug Design</b>					
a) Prediction and analysis of ADMET properties of new molecules and its importance in drug design. b) De novo drug design: Receptor/enzyme-interaction and its analysis, Receptor/enzyme cavity size prediction, predicting the functional components of cavities, Fragment based drug design. c) Homology modeling and generation of 3D-structure of protein.					
<b>UNIT – V</b>					
Pharmacophore Mapping and Virtual Screening Concept of pharmacophore, pharmacophore mapping, identification of Pharmacophore features and Pharmacophore modeling; Conformational search used in pharmacophore mapping. In Silico Drug Design and Virtual Screening Techniques Similarity based methods and Pharmacophore based screening, structure

Course Code	PHARMACEUTICAL PROCESS CHEMISTRY	L	T	P	C
21S02204		4	0	0	4
<b>Semester</b>		<b>II</b>			
<b>Course Objectives:</b>					
The goal of a process chemist is to develop synthetic routes that are safe, cost-effective, environmentally friendly, and efficient. The subject is designed to impart knowledge on the development and optimization of a synthetic route/s and the pilot plant procedure for the manufacture of Active Pharmaceutical Ingredients (APIs) and new chemical entities (NCEs) for the drug development phase.					
<b>Course Outcomes (CO):</b> Student will be able to					
<ul style="list-style-type: none"> <li>• The strategies of scale up process of APIs and intermediates</li> <li>• The various unit operations and various reactions in process chemistry</li> </ul>					
<b>UNIT – I</b>					
Process chemistry Introduction, Synthetic strategy Stages of scale up process: Bench, pilot and large-scale process. In-process control and validation of large-scale process. Case studies of some scale up process of APIs. Impurities in API, types and their sources including genotoxic impurities					
<b>UNIT – II</b>					
<b>Unit operations</b> <ol style="list-style-type: none"> <li>a) Extraction: Liquid equilibria, extraction with reflux, extraction with agitation, counter current extraction.</li> <li>b) Filtration: Theory of filtration, pressure and vacuum filtration, centrifugal filtration,</li> <li>c) Distillation: azeotropic and steam distillation</li> <li>d) Evaporation: Types of evaporators, factors affecting evaporation.</li> <li>e) Crystallization: Crystallization from aqueous, nonaqueous solutions factors affecting crystallization, nucleation. Principle and general methods of Preparation of polymorphs, hydrates, solvates and amorphous APIs.</li> </ol>					
<b>UNIT – III</b>					
<b>Unit Processes - I</b> <ol style="list-style-type: none"> <li>a) Nitration: Nitrating agents, Aromatic nitration, kinetics and mechanism of aromatic nitration, process equipment for technical nitration, mixed acid for nitration,</li> <li>b) Halogenation: Kinetics of halogenations, types of halogenations, catalytic halogenations. Case study on industrial halogenations process.</li> <li>c) Oxidation: Introduction, types of oxidative reactions, Liquid phase oxidation with oxidizing agents. Nonmetallic Oxidizing agents such as H<sub>2</sub>O<sub>2</sub>, sodium hypochlorite, Oxygen gas, ozonolysis.</li> </ol>					
<b>UNIT – IV</b>					
<b>Unit Processes - II</b> <ol style="list-style-type: none"> <li>a) Reduction: Catalytic hydrogenation, Heterogeneous and homogeneous catalyst; Hydrogen transfer reactions, Metal hydrides. Case study on industrial reduction process.</li> <li>b) Fermentation: Aerobic and anaerobic fermentation.</li> </ol> Production of

Course Code	RESEARCH METHODOLOGY AND INTELLECTUAL PROPERTY RIGHTS	L	T	P	C
21DRM101		4	0	0	4
<b>Semester</b>		<b>II</b>			
<b>Course Objectives:</b>					
To understand the research problem, know the literature studies, plagiarism and ethics. To get the knowledge about technical writing. To analyze the nature of intellectual property rights and new developments and patent rights.					
<b>Course Outcomes (CO):</b> Student will be able to					
<ul style="list-style-type: none"> <li>• Understand research problem formulation.</li> <li>• Analyze research related information</li> <li>• Follow research ethics</li> <li>• Understand that today's world is controlled by Computer, Information Technology, but tomorrow world will be ruled by ideas, concept, and creativity.</li> <li>• Understanding that when IPR would take such important place in growth of individuals &amp; nation, it is needless to emphasize the need of information about Intellectual Property Right to be promoted among students in general &amp; engineering in particular.</li> <li>• Understand that IPR protection provides an incentive to inventors for further research work and investment in R &amp; D, which leads to creation of new and better products, and in turn brings about, economic growth and social benefits.</li> </ul>					
<b>UNIT – I</b>					
Meaning of research problem, Sources of research problem, Criteria Characteristics of a good research problem, Errors in selecting a research problem, Scope and objectives of research problem. Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, Necessary instrumentations					
<b>UNIT – II</b>					
Effective literature studies approaches, analysis, Plagiarism, Research ethics					
<b>UNIT – III</b>					
Effective technical writing, how to write report, Paper Developing a Research Proposal, Format of research proposal, a presentation and assessment by a review committee					
<b>UNIT – IV</b>					
Nature of Intellectual Property: Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT.					
<b>UNIT – V</b>					
Patent Rights: Scope of Patent Rights. Licensing and transfer of technology. Patent information and databases. Geographical Indications. New Developments in IPR: Administration of Patent System. New developments in IPR; IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs.

Course Code	STRESSMANAGEMENT BY YOGA	L	T	P	C
21DAC201b			2	0	0
<b>Semester</b>		<b>II</b>			
<b>Course Objectives:</b> This course will enable students:					
<ul style="list-style-type: none"> <li>• To achieve overall health of body and mind</li> <li>• To overcome stress</li> </ul>					
<b>Course Outcomes (CO):</b> Student will be able to					
<ul style="list-style-type: none"> <li>• Develop healthy mind in a healthy body thus improving social health also</li> <li>• Improve efficiency</li> </ul>					
<b>UNIT - I</b>					
Definitions of Eight parts of yog.(Ashtanga)					
<b>UNIT - II</b>					
Yam and Niyam.					
<b>UNIT - III</b>					
Do` sand Don` t` sin life.					
i) Ahinsa,satya,astheya,bramhacharyaand aparigrahaaii)					
Shaucha,santosh,tapa,swadhyay,ishwarpranidhan					
<b>UNIT - IV</b>					
Asan and Pranayam					
<b>UNIT - V</b>					
i)Variousyogposesand theirbenefitsformind &body					
ii)Regularizationofbreathingtechniques and its effects-Types ofpranayam					
<b>Suggested Reading</b>					
1.‘Yogic Asanas forGroupTarining-Part-I’: Janardan SwamiYogabhyasiMandal, Nagpur					
2.‘Rajayogaor conquering the Internal Nature’ by Swami Vivekananda, Advaita Ashrama (Publication Department), Kolkata

Course Code	PERSONALITY DEVELOPMENT THROUGH LIFE ENLIGHTENMENT SKILLS	L	T	P	C
21DAC201c		2	0	0	0
<b>Semester</b>		<b>II</b>			
<b>Course Objectives:</b> This course will enable students:					
<ul style="list-style-type: none"> <li>• To learn to achieve the highest goal happily</li> <li>• To become a person with stable mind, pleasing personality and determination</li> <li>• To awaken wisdom in students</li> </ul>					
<b>Course Outcomes (CO):</b> Student will be able to					
<ul style="list-style-type: none"> <li>• Study of Shrimad-Bhagwad-Geeta will help the student in developing his personality and achieve the highest goal in life</li> <li>• The person who has studied Geeta will lead the nation and mankind to peace and prosperity</li> <li>• Study of Neetishatakam will help in developing versatile personality of students</li> </ul>					
<b>UNIT - I</b>					
Neetisatakam- Holistic development of personality Verses-19,20,21,22(wisdom) Verses-29,31,32(pride & heroism) Verses-26,28,63,65(virtue)					
<b>UNIT - II</b>					
Neetisatakam- Holistic development of personality Verses-52,53,59(dont's) Verses-71,73,75,78(do's)					
<b>UNIT - III</b>					
Approach to day to day work and duties. Shrimad Bhagwad Geeta: Chapter 2- Verses 41,47,48, Chapter 3- Verses 13,21,27,35, Chapter 6- Verses 5,13,17,23,35, Chapter 18- Verses 45,46,48.					
<b>UNIT - IV</b>					
Statements of basic knowledge. Shrimad Bhagwad Geeta: Chapter 2- Verses 56,62,68 Chapter 12 - Verses 13,14,15,16,17,18 Personality of Role model. Shrimad Bhagwad Geeta:					
<b>UNIT - V</b>					
Chapter 2- Verses 17, Chapter 3- Verses 36,37,42, Chapter 4- Verses 18,38,39 Chapter 18- Verses 37,38,63					
<b>Suggested Reading</b>					
1. "Srimad Bhagavad Gita" by Swami Swarupananda Advaita Ashram (Publication Department), Kolkata 2. Bhartrihari's Three Satakam (Niti-sringar-vairagya) by P. Gopinath, Rashtriya Sanskrit Sansthanam, New Delhi.

Course Code	BIOLOGICAL SCREENING METHODS	L	T	P	C
21SOE301d	( Elective)	3	0	0	3
<b>Semester</b>		<b>III</b>			
<b>Course Objectives:</b>					
The students are going to study about various techniques for screening of drugs for various pharmacological activities and guide lines for handling animals and human and animal ethics for screening of drugs.					
<b>Course Outcomes (CO):</b> Student will be able to know					
<ul style="list-style-type: none"> <li>• How to handle animals</li> <li>• About various techniques for screening of drugs for different pharmacological activities</li> <li>• Guidelines and regulations for screening new drug molecules on animals.</li> </ul>					
<b>UNIT – I</b>					
<b>Drug discovery process:</b>					
Principles, techniques and strategies used in new drug discovery. High throughput screening, human genomics, robotics and economics of drug discovery, Regulations. Alternatives to animal screening procedures, cell-line, patch –clamp technique, In-vitro models, molecular biology techniques.					
<b>UNIT – II</b>					
<b>Bioassays:</b>					
Basic principles of bioassays, official bioassays, experimental models and statistical designs employed in biological standardization.					
<b>UNIT – III</b>					
<b>Toxicity Evaluations</b>					
Principles of toxicity evaluations, ED50, LD50 and TD values, International guidelines (ICH recommendations).					
Preclinical studies: General principles and procedures involved in acute, sub-acute, chronic, teratogenicity, mutagenicity and carcinogenicity.					
<b>UNIT – IV</b>					
<b>Screening of drugs</b>					
Screening of different classes of drugs using micro-organisms. Vitamin and antibiotic assays. Screening methods involved in toxins and pathogens.					
<b>UNIT – V</b>					
<b>Enzymatic screening methods</b>					
$\alpha$ -glucosidase, $\alpha$ - amylase, DNA polymerase, nucleases, Lasparginase, lipases and peptidases.

Course Code	ENTREPRENEURSHIP MANAGEMENT ( Elective)	L	T	P	C
		21SOE301c	3	0	0
<b>Semester</b>		<b>III</b>			
<b>Course Objectives:</b>					
This course is designed to impart knowledge and skills necessary to train the students on entrepreneurship management.					
<b>Course Outcomes (CO):</b> Student will be able to					
On completion of this course it is expected that students will be able to:					
<ul style="list-style-type: none"> <li>• The Role of enterprise in national and global economy</li> <li>• Dynamics of motivation and concepts of entrepreneurship</li> <li>• Demands and challenges of Growth Strategies and Networking</li> </ul>					
<b>UNIT – I</b>					
Conceptual Frame Work: Concept need and process in entrepreneurship development. Role of enterprise in national and global economy. Types of enterprise – Merits and Demerits. Government policies and schemes for enterprise development. Institutional support in enterprise development and management.					
<b>UNIT – II</b>					
Entrepreneur: Entrepreneurial motivation – dynamics of motivation. Entrepreneurial competency – Concepts. Developing Entrepreneurial competencies - requirements and understanding the process of entrepreneurship development, self-awareness, interpersonal skills, creativity, assertiveness, achievement, factors affecting entrepreneur role.					
<b>UNIT – III</b>					
Launching and Organizing an Enterprise: Environment scanning – Information, sources, schemes of assistance, problems. Enterprise selection, market assessment, enterprise feasibility study, SWOT Analysis. Resource mobilization -finance, technology, raw material, site and manpower. Costing and marketing management and quality control. Feedback, monitoring and evaluation.					
<b>UNIT – IV</b>					
Growth Strategies and Networking: Performance appraisal and assessment. Profitability and control measures, demands and challenges. Need for diversification. Future Growth – Techniques of expansion and diversification, vision strategies. Concept and dynamics. Methods, Joint venture, coordination and feasibility study.					
<b>UNIT – V</b>					
Preparing Project Proposal to Start on New Enterprise Project work – Feasibility report; Planning, resource mobilization and implementation.

Course Code	PHARMACOEPIDEMOLOGY & PHARMACOECONOMICS (Elective-I)	L	T	P	C
21SOE301e		3	0	0	3
<b>Semester</b>		<b>III</b>			
<b>Course Objectives:</b>					
This course enables students to understand various pharmacoepidemiological methods and their clinical applications. Also, it aims to impart knowledge on basic concepts, assumptions, terminology, and methods associated with Pharmacoeconomics and health related outcomes, and when should be appropriate Pharmacoeconomic model should be applied for a health care regimen.					
<b>Course Outcomes (CO):</b> Student will be able to					
<ul style="list-style-type: none"> <li>• Understand the various epidemiological methods and their applications</li> <li>• Understand the fundamental principles of Pharmacoeconomics.</li> <li>• Identify and determine relevant cost and consequences associated with pharmacy products and services.</li> <li>• Perform the key Pharmacoeconomics analysis methods</li> <li>• Understand the Pharmacoeconomic decision analysis methods and its applications.</li> <li>• Describe current Pharmacoeconomic methods and issues.</li> <li>• Understand the applications of Pharmacoeconomics to various pharmacy settings.</li> </ul>					
<b>UNIT – I</b>					
<b>Introduction to Pharmacoepidemiology</b>					
Definition, Scope, Need, Aims & Applications; Outcome measurement: Outcome measures, Drug use measures: Monetary units, Number of prescriptions, units of drug dispensed, defined daily doses, prescribed daily doses, Diagnosis and Therapy surveys, Prevalence, Incidence rate, Monetary units, number of prescriptions, unit of drugs dispensed, defined daily doses and prescribed daily doses, medications adherence measurements.					
Concept of risk: Measurement of risk, Attributable risk and relative risk, Time- risk relationship and odds ratio					
<b>UNIT – II</b>					
<b>Pharmacoepidemiological Methods</b>					
Qualitative models: Drug Utilization Review; Quantitative models: case reports, case series, Cross sectional studies, Cohort and case control studies, Calculation of Odds' ratio, Meta-analysis models, Drug effects study in populations: Spontaneous reporting, Prescription event monitoring, Post marketing surveillance, Record linkage systems, Applications of Pharmacoepidemiology					
<b>UNIT – III</b>					
<b>Introduction to Pharmacoeconomics</b>					
Definition, history of Pharmacoeconomics, Need of Pharmacoeconomic studies in Indian healthcare system. Cost categorization and resources for cost estimation: Direct costs. Indirect costs. Intangible costs. Outcomes and Measurements of Pharmacoeconomics: Types of outcomes: Clinical outcome, Economic outcomes, Humanistic outcomes; Quality Adjusted Life Years, Disability Adjusted Life Years Incremental Cost-Effective Ratio, Average Cost-Effective Ratio. Person Time, Willingness to Pay, Time Trade Off and Discounting.					
<b>UNIT – IV</b>					
<b>Pharmacoeconomic evaluations</b>					
Definition, Steps involved, Applications, Advantages and disadvantages of the following Pharmacoeconomic models: Cost Minimization Analysis (CMA), Cost Benefit Analysis (CBA), Cost Effective Analysis (CEA), Cost Utility Analysis (CUA), Cost of Illness (COI), Cost Consequences
